SUMMARY

Informatics student with hands-on experience developing digital systems, analyzing operational requirements, and translating them into reliable technical solutions. Experienced in backend development, REST APIs, database design, real-time systems, data analysis, and cross-functional collaboration. Demonstrated ability to build end-to-end applications and coordinate small development teams across logistics, warehouse, IoT, and event-management projects.

EDUCATION

Petra Christian University	2024 – Present
Informatics	GPA: 3.97/4.00

PROJECTS

BanyuIn (IoT Water Quality Monitoring System)	Jun 2026
--	----------

Full-Stack & IoT Developer | Flutter, Go, MySQL, ESP32, SSE, FCM

- Developed an IoT monitoring system that measures pond water pH using an ESP32 and transmits sensor readings to a Go backend every five minutes.
- Built a Go REST API to store sensor data, manage monitoring nodes, and stream new readings to a Flutter application using Server-Sent Events.
- Implemented threshold-based early warnings with Firebase Cloud Messaging notifications and developed mobile interfaces for viewing current and historical pH conditions.

LogiX (Logistics and Fleet Management Platform) Three-Person Team Project	Jun 2026
--	----------

Backend Developer | Laravel, Redis, Laravel Reverb, WebSockets, OSRM, SeaRoute, MySQL

- Developed RBAC for four operational roles and built fleet workflows covering vehicles, driver assignments, maintenance schedules, shipment cargo, and delivery monitoring.
- Implemented real-time driver tracking by processing periodic GPS updates through backend APIs and broadcasting shipment-location events using Laravel Reverb and WebSockets.
- Integrated land and sea routing outputs with shipment data and tariff calculations to provide route, distance, duration, and estimated delivery-cost information.

GudangPintar (Warehouse Management SaaS) Five-Person Team Project	Nov 2025 - Dec 2025
--	---------------------

Backend Developer & Team Coordinator | PHP, MySQL, Midtrans, QR Code

- Developed inventory, batch, and warehouse transaction modules using native PHP, covering item storage, supply, purchase, and transaction-history workflows.
- Implemented QR-based batch identification and scanning to support inventory tracking and warehouse operations.
- Integrated Midtrans subscription payments for SaaS renewal workflows and coordinated development across a five-person team using GitHub issues and pull requests.

WORK & ORGANIZATIONAL EXPERIENCE

Laboratory Assistant

Jan 2026 - Present

Petra Christian University

- Maintained laboratory hardware, software, and system configurations to support daily academic and practical sessions.
- Assisted students with programming environments, software usage, and technical troubleshooting during laboratory activities.

Assistant Lecturer

Aug 2025 - Present

Petra Christian University

- Assisted in teaching Algorithm and Programming with Python and Object-Oriented Programming with Java, guiding students through practical exercises, assignments, and programming fundamentals.
- Reviewed student work and explained algorithms, problem-solving approaches, and object-oriented programming concepts.

IT Coordinator

Oct 2025 - May 2026

Petra Civil Expo 2026

- Led a four-developer team and designed the database and registration workflow for an event platform serving 200+ groups and approximately 600 participants.
- Engineered real-time Tap-Tap and Rally game systems using Laravel Events and Ably WebSockets, supporting 200+ concurrent participants during live sessions.
- Built administrative workflows for participant management, checking-day verification, Excel reporting, Google authentication, and rotating QR attendance, and deployed the production system through cPanel.

Vice IT Coordinator

Oct 2025 - Aug 2026

Innofashion Show 8

- Led and mentored three developers while overseeing backend, frontend, integration, and production deployment workflows.
- Designed Laravel REST APIs with Sanctum authentication and Spatie permission management for multi-division administration, covering registration, participant recaps, evaluation management, and QR attendance.
- Built a dynamic evaluation form builder and integrated a Next.js frontend with the Laravel API using a Backend-for-Frontend service layer, NextAuth, and Laravel Socialite.

TECHNICAL SKILLS

Languages: PHP, Go, Python, JavaScript, TypeScript, Java, SQL

Frameworks: Laravel, Livewire, Next.js, React, Flutter

Databases & Realtime: MySQL, PostgreSQL, Redis, WebSockets, SSE

Tools & Concepts: Git, Docker, Linux, REST APIs, Database Design, Authentication, RBAC
